DeepTrustxAI

NirnayakX

Advanced AI-Powered Attack & Intelligence Platform

- A next generation Command & Control (C2) platform designed for realworld cyberspace
- AI based natural language interface for operator workflows and commands
- Builtin evasion methods with custom loaders for stealthy execution
- Staged deployment for adversarial environment mapping and delayed execution
- Curated repository of custom and vetted security tools
- Efficient in memory execution capabilities, including support for BOFs
- Modular Architecture designed for integration with open-source C2 frameworks
- Support for custom modules, uploaders, and capability extensions
- Support for multiple proxy & traffic tunneling modes
- Advanced beacon support for controlled network communications
- AI based natural language support for extracting intelligence from uploaded artifacts
- Operator Dashboard for real-time control, tasking, and operational monitoring

Note: For sale to trusted and verified Government Entities Only.
